WDD330 Final Project Proposal – Cinema Ratings

Overview:

Problem Statement:

Sometimes people want to know or compare their favorite movies with other people thinks, and I want to set a page, a secure page where people can navigate safely and make sure that the opinions are from people like them, “normal people”.

Why are we going this?

In my region We do not have a normal site where we can vote or publish our opinion and guarantee that our opinion is being listened or seen, I’m doing this to practice my skills and start a smart page.

My Audience:

My Audience is concentrated in young people an age interval of 12 to 29 years, because the movies are kind of action, romantic, comedy, heroes, terror, religion, etc.

Functions:

- 1) RenderFooterAndHeader: this function will be established to upload the footer and header faster.
- 2) RenderListView: this function will be established to set the list view for the catalog page.
- 3) RenderGridView: this function will be established to set the grid view for the catalog page.
- 4) RateMovie: this function will be established to upload the rate into our page.
- 5) ViewHistoric: this function will be established to save all movies that the user has seen it.

Wireframes:

into this [link](#) you can see our wireframes or click on the pdf document.
